

TRAINING DELIVERY PLATFORM

Bridgeborn's Training Delivery Platform© (TDP) is a web-based framework developed to deliver training materials and educational content via the internet. Leveraging our skills in Service Oriented Architectures (SOA), web services and Extract, Transform, Load and Visualize© (ETL-V), Bridgeborn has created an extensible, easily customizable framework that can be used to support training/education goals and objectives for virtually any commercial industry or Federal agency. The key components of the Training Delivery Platform© include widely accepted and supported open source Learning and Content Management Systems as well as Bridgeworks© (Bridgeborn's data visualization platform) for powering completely interactive, 3D graphical representations of products, processes and systems. This unique combination offers an intuitive and highly effective solution that has already been deployed to major domestic and international customers in Defense, Power and Healthcare. Used to support in-class instruction, web-based e-learning, as well as on-site "Just-in-Time" training for critical problems, the TDP©'s overarching framework provides access to virtually any educational content and multimedia and allows for reuse in 70+ languages.

FEATURES

- Delivers instructional training material and real-time simulations over the web
- Embeds and links to accurately rendered 3D visualizations
- Connects real-time simulations to classroom learning material over the web
- Training/education environment uses completely interactive, 3D visualizations to communicate complex products, processes and systems
- Content Management Systems with Single Sign On (SSO) capability provides web based access to any form of data, content and multimedia
- Learning Management System includes capability to monitor student logins and length of login, administer and track quizzes/tests, track grades received, and monitor/coordinate student progress

BENEFITS

- Training Delivery Platform© saves educators time and money by providing a single online environment for all curriculum; solution provides trainers and super-trainers with global access and control of curriculum, testing and student tracking
- Learning Management System with robust reporting mechanisms can save time and reduce liabilities (compliance related) by providing proactive, real-time visibility into student performance on quizzes and tests
- Interactive, 3D visualizations reduce time necessary to be trained on complex products and processes - which saves time and money
- Bridgeworks© solutions can be reused across generations: intuitive, 3D training tools are effective and engaging for the aging workforce as well as younger trainees more accustomed to multimedia and web-based environments
- Interactive, 3D training solutions reduce time to be trained and increase retention rates of trainees; "learning by doing" in interactive training environments has been proven to increase retention rates
- Web deliverable solutions increase the productivity of the workforce by only providing training when it is needed (i.e. "Just-in-Time" training)

TRAINING DELIVERY PLATFORM - POWERED BY BRIDGEWORKS©
